Methodology

## ALPHA VARIN COMPLEX™ PHASE 1 HUMAN CLINICAL TRIAL

Study Type: Interventional (Clinical Trial)

Estimated Enrollment: 40 participants

Allocation: Randomized

Primary Purpose: Treatment

Official Title: *Androgenetic Alopecia Treatment Using Varin and Cannabidiol-rich Topical Hemp Oil - A Case Series*

ClinicalTrials.gov Identifier: NCT04842383

Intervention Model: Parallel Assignment

Intervention Model Description: 40 subjects will be randomly assigned into two treatment groups, 500mg of cannabinoids per ounce and 1000mg of cannabinoids per ounce. The change in hair follicle numbers will be compared statistically between the two groups.

Masking: Double (Participant, Outcomes Assessor)

Masking Description: The participants in the study and the outcomes assessor on day 0 and day 180 will be prevented from having knowledge of which of the two strengths of cannabinoid topicals were used.

NIH-Identified Phase 1 human clinical trial sponsored by principal investigator, Gregory L. Smith, MD, MPH; and conducted under the guidance of researcher, John Satino, at the Laser Hair Center in Clearwater, FL. The clinical trial measured nonvellus hair counts within a one centimeter square of the subject's area of most significant balding as marked by a tattoo.

Safety & Toxicity:

No adverse reactions were reported by any study participants.

*Note: Subjects utilized no hair loss treatments, including minoxidil and/or finasteride during the six months of the study.*

ALPHA VARIN COMPLEX™

# HAIR STUDY

Preliminary Clinical Results

NIH-IDENTIFIED PHASE 1 HUMAN  
CLINICAL TRIAL

## ALPHA VARIN Complex™ A Complete CB1 Receptor Antagonist

Blocking the human body's CB1 receptors with ALPHA VARIN Complex™ results in (1) the stimulation of keratinocytes which results in hair shaft elongation and (2) stimulation of matrix cells which results in thickening of the hair shaft. ALPHA VARIN Complex™ also stimulates the TRPV1 receptor which lengthens the duration of time the hair shaft is in the telogen, or resting phase, of the growth cycle.

The results in this clinical trial show increases in hair shaft thickness, hair shaft health, and hair counts in the areas of balding.

### FINDING 01

#### Hair Thickness and Health

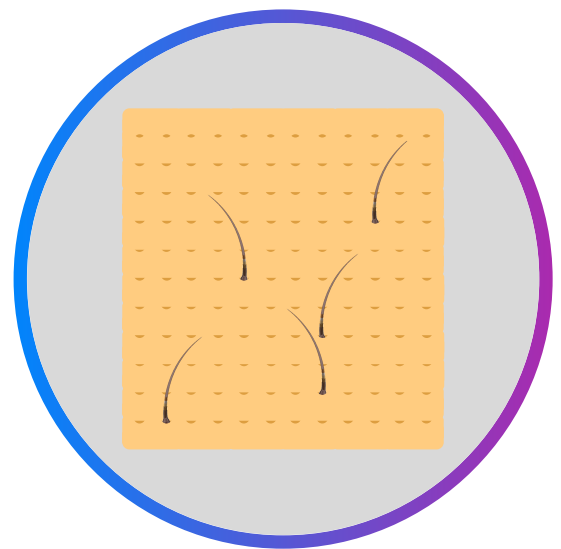

Using ALPHA VARIN Complex™ study participants experienced significantly thicker and healthier hair.

### FINDING 02

#### Hair Counts at Day 0

100% of study participants using ALPHA VARIN Complex™ experienced at least 105% increase in new nonvellus hair counts over the 180 day trial.

### FINDING 03

#### Hair Counts at Day 180

Multiple study participants using ALPHA VARIN Complex™ experienced an 800%+ increase in new nonvellus hair counts with an average increase per study participant of 371%.

ALPHA VARIN COMPLEX™

# HAIR STUDY

Preliminary Clinical Results

NIH-IDENTIFIED PHASE 1 HUMAN  
CLINICAL TRIAL

## ALL-NATURAL ALPHA VARIN COMPLEX™ INCREASED HAIR COUNTS

Participants used the All-Natural ALPHA VARIN Complex™ for 180 days. On average, study participants experienced 371% increase in new nonvellus hair counts as measured in the test-count area. The test-count area was a 1cm-square area marked with a tattoo and located in the area of most significant balding.

## ALL-NATURAL ALPHA VARIN COMPLEX™ INCREASED HAIR SHAFT THICKNESS AND HEALTH

Participants used the All-Natural ALPHA VARIN Complex™ for 180 days. In addition to the significant increases in new novellus hair counts, study participants also experienced a significantly thicker core of the hair shaft and improved healthy appearance of the hair.

ALPHA VARIN COMPLEX™

# HAIR STUDY

Preliminary Clinical Results

NIH-IDENTIFIED PHASE 1 HUMAN CLINICAL TRIAL

100% of study participants using ALPHA VARIN Complex™ experienced at least 105% increase in new nonvellus hair counts

Upon completion of the study, participants indicated an average 91% satisfaction with the ALPHA VARIN Complex™.

## Increased New Nonvellus Hair Counts

On average, study participants using ALPHA VARIN Complex™ experienced a 371% increase in new nonvellus hair counts as measured in the test-count area.

## Improved Hair Thickness and Health

Study participants using ALPHA VARIN Complex™ experienced significantly improved hair thickness and health.

23% of study participants saw new nonvellus hair count increases of at least 8X

31% of study participants saw new nonvellus hair count increases of at least 5X

62% of study participants rated ALPHA VARIN™ a perfect 10 out of 10

Virtually all hair restoration products on the market are made from synthetic pharmaceuticals with a multitude of potential side-effects and warnings for use.

ALPHA VARIN Complex™ is 100% All-Natural and can be used safely with confidence.

All-Natural ALPHA VARIN™ hair products are powered by BEVARIN Wellness' proprietary ALPHA VARIN Complex™ and completely block the body's CB1 receptors leading to incredible hair restoration and increases. For best results and to maintain hair increases, continued use of the product is recommended.
